

ASSET LIFE MANAGER

OBJECTIVE: Compile complete documentation about all computers on the network.

Your company is being audited by Microsoft, for example, to ensure the validity of your company's licenses. How can your IT team release a detailed report of all your licenses without spending 3 days on the task?

BLĚSK Asset Life Manager (ALM) provides an overview of the hardware and software assets in your organization's IT inventory, making it easy to know which software is used, which versions, and the number of licenses available.

With its Open Source GLPI tool, ALM provides many advanced features for inventory and asset management.

BENEFITS

- Asset inventory: computers, monitors, printers, network equipment, devices and phones.
- Detailed view of the assets, with their connections and network ports.
- Full history of each asset change.
- Operating system management (name, version, edition, kernel, license, etc.)
- Management of software installed.
- Management of internal components.
- Inventory of network components, remote port connection (IP address, MAC, VLAN, network jack, etc.)
- Life cycle management of assets (from stock to removal).

- Management of data centers (rooms, boxes, racks, PDUs).
- Inventory of printers, cartridges, consumables.
- Certificate Management.

BLĚSK CAN HELP YOU

ALM lets you a search with filters to discover the licenses you have in your environment.

In addition, ALM can store documents such as:

- The purchase cost.
